

PATIENT

Remi Mitton

PRESENTING CLINICAL SIGNS

dry coughing for about a week currently on clavaseptin 500mg BID

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Right/left lateral and ventrodorsal views of the thorax totaling 3 images available for review in jpeg format.

BREED

Labrador Retriever

Only jpg images were submitted. The transformation from DICOM to jpg only allows for limited manipulation of the image. For the best possible results, we suggest submitting DICOM images in the future. Please do not hesitate to contact us should you need any help with the submission process.

RADIOGRAPHIC FINDINGS

SEX

FS

The degree of pulmonary inflation is fair. A moderate generalized bronchointerstitial lung pattern with strong peribronchial cuffing is seen and evenly distributed throughout the entire lung.

AGE

2 Years

The cardiac silhouette presents no abnormality regarding its size and shape other than relatively small size and upright position. The pulmonary vasculature appears to be thin.

No evidence of mediastinal lymphadenomegaly or other mediastinal widening is seen.

Course and width of the thoracic trachea are considered within normal limits.

Note the presence of mild aerophagia in a postprandial stomach.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

RADIOGRAPHIC DIAGNOSIS

- Moderate generalized bronchointerstitial lung pattern.
- Hypovolemia with microcardia and underperfusion of the lung.

HOSPITAL NAME

The Collegeway
Animal Hospital

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study suggests presence of active lower airway disease. Canine infectious respiratory disease complex and other infectious bronchopneumonia including viral, bacterial, and parasitic is a primary differential diagnosis. Eosinophilic/allergic bronchopneumopathy is a potential differential diagnosis. Further definition by means of airway endoscopy and airway sampling could be considered should the patient remain refractory to the initiated medication. Narrow clinical monitoring is advised. Lung worm testing could be considered.
