

**PATIENT**

Haiti Llompart

**PRESENTING CLINICAL SIGNS**

The patient came in presenting a subcutaneous firm rapidly growing mass. Rule-out lytic bone involvement.

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE LEFT FOREARM**

Mediolateral and craniocaudal views of the left forearm totaling 2 images available for review in jpeg format.

**BREED**

Mixed

Only jpg images were submitted. The transformation from DICOM to jpg only allows for limited manipulation of the image. For the best possible results, we suggest submitting DICOM images in the future. Please do not hesitate to contact us should you need any help with the submission process.

**SEX**

Female Spayed

**RADIOGRAPHIC FINDINGS**

A uniformly soft tissue opaque, large, ovoid mass is caudal and lateral in the proximal left forearm. No evidence of aggressive osteolytic changes of the radius or ulnar are seen. The position of the mass coincides with the attachment of the interosseous membrane between the radius and ulna which explains the roughening of the caudal cortex of the radius and cranial cortex of the ulna and should not be mistaken for osteolysis.

**AGE**

13 Years

An enthesophyte of the lateral humeral epicondyle is present and an isolated rounded ossicle is seen lateral and proximal of the distal interphalangeal joint of the 5<sup>th</sup> digit.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

**RADIOGRAPHIC DIAGNOSIS**

- Soft tissue mass caudal and lateral in the proximal left forearm without evidence of osseous involvement.
- Lateral humeral epicondyle enthesophyte.
- Arthropathy of the distal interphalangeal joint of the 5<sup>th</sup> digit in the left front paw.

**HOSPITAL NAME**

Paseos Veterinary Center

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic findings are compatible with soft tissue neoplasia such as soft tissue sarcoma. Theoretically, hematoma, cyst, granuloma, and abscess are potential differential diagnoses which all are considered less likely. Further definition by means of sampling for cytology or histology is recommended.
