

**PATIENT PRESENTING CLINICAL SIGNS**

Lucy Atlee CROSSING OVER BOTH HIND LIMBS WHEN STANDING , hematuria  
Abnormal PE/Chem/CBC/UA Results: BW is unremarkable

**SPECIES RADIOGRAPHIC STUDY OF THE ABDOMEN & LUMBAR SPINE**

Canine Lateral views of the abdomen and lumbar and ventrodorsal view of the pelvis totaling 3 images available for review.

**BREED RADIOGRAPHIC FINDINGS**

Boxer Mild spondylosis deformans is seen between T12 and T13. Severe spondylosis deformans between L1 and L2.

**SEX** Mild bilateral coxofemoral joint osteoarthritis is noted.

Female Spayed A series of mild spondylarthritis is seen within the cranial lumbar spine.

The liver appears to be relatively small.

**AGE** A mild amount of gas is seen within the stomach.

9 Years The spleen, kidneys, large, and small intestine all present within normal limits.

**INTERPRETED BY** The urinary bladder is moderately distended. No evidence of abnormal opacities or mass effects are seen.

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

There is no evidence of sublumbar soft tissue swelling.

**HOSPITAL NAME RADIOGRAPHIC DIAGNOSIS**

St. Catherine's Animal  
Hospital

- Spondylosis deformans.
- Degenerative spondyloarthropathy.
- Mild bilateral coxofemoral joint osteoarthritis.
- Normal radiographic presentation of the lower urinary tract.

**REFERRING VET INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Dr. Boctor The radiographic study reveals spondylosis deformans in the caudal thoracic and cranial lumbar spine as well as degenerative changes of the articular facets in the cranial lumbar spine which do not fully explain the patient's clinical signs. Other neurologic disease will require further workup by means of cross sectional imaging, ideally an MRI.

**INVOICE** 50497 The radiographic presentation of the urinary bladder and sublumbar soft tissues was within normal limits. Further definition by means of ultrasound is recommended including full urinalysis.
