

PATIENT

Maxine DiBitetto

PRESENTING CLINICAL SIGNS

Right hind lameness x 4 days. Pain on hip extension.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE PELVIS & RIGHT STIFLE

Mediolateral view of the right stifle and 3 ventrodorsal hip extended views of the pelvis totaling 4 images available for review.

BREED

Basset Hound

RADIOGRAPHIC FINDINGS

There appears to be generalized osteopenia.

The long bones are stunted with prominent epiphyses and apophyses as typical in chondrodystrophic dogs.

SEX

Female (spayed)

No significant hip dysplasia or osteoarthritis is seen.

There is no evidence of aggressive bone lesions.

AGE

10 Years

No evidence of articular swelling of the right stifle is seen and there is no evidence of cranial thrust of the tibia or subchondral bone defects. The periarticular margins present smooth. The patellae are in situ.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

RADIOGRAPHIC DIAGNOSIS

- Radiographically normal age and breed related coxofemoral and stifle joints.

HOSPITAL NAME

Four Corners
Veterinary Practice

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic presentation of the coxofemoral and stifle joints was within age related and breed related normal limits. No significant osteoarthritic changes, signs of hip dysplasia, osteoarthritis, or articular swelling of the right stifle are seen. Consider lameness of other origin including soft tissue trauma and inflammation as well as neurologic disease.
