PRESENTING CLINICAL SIGNS

Rechecking: FB? Coughing/Hacking History: P presents for possible recheck rads to rule out FB. P was here at hospital last night and P was given barium for rads this am. However, throughout the day P was more coughing and hacking up white foam, rather than vomiting. Per VL he believes it may be upper respiratory issue rather than GI.

SPECIES

RADIOGRAPHIC STUDY OF THE THORAX

Right lateral and ventrodorsal views totaling 2 images available for review.

RADIOGRAPHIC FINDINGS

SEX

The surrounding bony structures are within normal limits.

NM

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

2 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME

DPC Veterinary
Hospital

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

REFERRING VET

Dr. Rivera

Remnants of positive contrast media are seen within the large intestine in the cranial abdomen.

RADIOGRAPHIC DIAGNOSIS

- Radiographically normal thorax.

INVOICE

50471

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals no evidence of bronchopulmonary or cardiovascular pathology. Upper respiratory tract disease obviously remains a potential.
