

PATIENT PRESENTING CLINICAL SIGNS

Hiccup Riddell
 Hiccup isn't acting like herself. She usually is very active and social for her food and brushing session but the past couple days she hasn't eaten and when Sarah touches her she just curls up even harder in a ball. She tried to palpate her back and legs and wasn't finding any pain. She didn't see any punctures or bruising and has seen a stray orange cat around their house. She is a barn cat that roams a bit but stays on the property. She does hunt as well. Sarah said when she touched her belly and she grumbled a little bit.
 Abnormal PE/Chem/CBC/UA Results: Abdomen, PAINFUL TO PALPATION. LETHARGIC GRADE I DENTAL DISEASE NOTHING UNDER TONGUE Temp was 106.8

BREED RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

DLH
 Right/left lateral and ventrodorsal views of the thorax and abdomen totaling 7 images available for review.

SEX RADIOGRAPHIC FINDINGS

Spayed
Thorax

AGE
 11 Years
 The surrounding bony structures are within normal limits.
 The extrathoracic soft tissues present homogeneous without abnormalities.

INTERPRETED BY

Nele Eley, DVM
 Dr. med. Vet. DipECVDI
 The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.
 The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

HOSPITAL NAME

Elizabeth Animal Hospital
 The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.
 The degree of pulmonary inflation is deep. A moderate generalized bronchial lung pattern with mild peribronchial cuffing is seen and accentuated in the caudodorsal aspect of the lung.

REFERRING VET

Leon Anderson, DVM
 The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

INVOICE

50578
 The surrounding bony structures are within normal limits.
 No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

DATE

2-25-22
 The serosal detail is maintained throughout the peritoneal and retroperitoneal space.
 The liver is appropriate in position, size and presents uniform opacity.
 The splenic head is in the anticipated position and within normal limits for size and opacity. The

PATIENT

splenic tail is not seen.

Hiccup Riddell

Pinpoint mineral opacities superimpose onto the kidneys level with the renal diverticuli. Shape and size of the kidneys are considered within normal limits.

SPECIES

The urinary bladder is in its anticipated position.

Feline

The stomach is in its anticipated position and presents normal content.

BREED

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

DLH

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

SEX

Spayed

- Bronchial lung pattern.
- Bilateral hypercalcemic nephropathy.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

AGE

11 Years

The radiographic study reveals a bronchial lung pattern. Consider allergic lower airway syndrome a potential as well as infectious bronchitis such as viral, bacterial, and less likely parasitic, or protozoal. Clinical significance, especially in lower airway disease, is not necessarily given. Further definition would only be indicated in case of pertinent clinical signs.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The renal changes may not be of clinical significance as well. Correlate with the laboratory values.

There was no radiographic evidence of thoracolumbar spinal pathology.

HOSPITAL NAME

Elizabeth Animal
Hospital

The source of the pain is unclear. Full internal medicine and neuro-orthopedic workup could be considered.
