DipECVDI

IMAGING PERFORMED BY

Mason

HOSPITAL NAME

Mountain West
Veterinary Specialists

REFERRING VET

Dr. David Mason

INVOICE

73645

DATE

2-5-26

PRESENTING CLINICAL SIGNS

Acute onset lameness of the right forelimb 2 weeks prior when patient was outside playing.

COMPUTED TOMOGRAPHIC STUDY OF THE ELBOWS

Plain study available for review.

COMPUTED TOMOGRAPHIC FINDINGS

The elbows present normal anatomy and congruence. Joint spaces are symmetric. There is no evidence of subchondral bone lesions, osteophytes, or fragmentation noted. No periarticular mineralization or soft tissue swelling is seen. The surrounding bones present normal cortical and medullary architecture.

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Normal CT presentation of both elbows.

INTERPRETATION OF FINDINGS & FURTHER RECOMMENDATIONS

There is no CT evidence of fracture, osteochondral disease, medial coronoid pathology, or degenerative changes. A structural cause of the acute right forelimb lameness is not identified. The lameness may be soft tissue related such as sprain, strain, contusion, or other. Neurologic causes or subtle musculoskeletal pain cannot be excluded. Correlation with physical examination is recommended as well as conservative management with rest and restricted activity and anti-inflammatory or analgesic medication as clinically indicated.

The information and recommendations provided are based on the images presented by the referring veterinarian. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.

Nele Eley (Ondreka), DVM, Dr. med. vet., DipECVDI

European Specialist in Veterinary Diagnostic Imaging, Cert. Radiology,
Senior lecturer University of Giessen/Germany, Veterinary Faculty, Department of Radiology.
