

PATIENT

Audrey Young

PRESENTING CLINICAL SIGNS

Vestibular episode, occasional cough and reverse sneeze

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Right/left lateral and ventrodorsal views of the thorax and lateral and ventrodorsal views of the abdomen totaling 5 images available for review.

BREED

Hound Mix

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

SEX

FS

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

13 Years, 4 Months

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

Multiple age related incidental pulmonary osteomas are seen. The radiographic presentation of the bronchial tree is considered within age related normal limits. No evidence of pulmonary nodules or masses is seen.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Bergen County
Veterinary Center

Abdomen

Mild generalized osteopenia is noted.

There is a well delineated subcutaneous mineral opacity in the dorsum between the 3rd and 4th lumbar vertebrae.

REFERRING VET

Jaclyn Lewis

The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

50152

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

DATE

2-7-22

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

PATIENT Moderate gastric aerophagia is noted.

Audrey Young The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

SPECIES The colon is seen in the expected position and presents with appropriate content.

Canine

RADIOGRAPHIC DIAGNOSIS

- Radiographically normal thorax and abdomen.
- Mineralizing subcutaneous nodule in the lumbar dorsum.

BREED

Hound Mix

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic presentation of the lung and bronchial tree is considered within normal limits.

SEX

The gastric aerophagia may be stress related or indicate pain.

FS

The abdominal study revealed no evidence of organomegaly, abnormal serosal detail, or mass effects.

AGE

13 Years, 4 Months
