

PATIENT

Jack Vasko

PRESENTING CLINICAL SIGNS

Vomited yesterday two times, no vomit since then. Diarrhea with some blood started yesterday. Ate today around 4 pm and no vomit. Lethargic. Tense on abdominal palpation. No history of garbage exposure or diet change. No history of chewing into things.

SPECIES

Canine

Abnormal PE/Chem/CBC/UA Results: Blood work : - CBC indicate increase in WBC, Neut and Baso, decrease in Lym, otherwise unremarkable / normal. - Chemistry indicate stress glucose, mild increase in Cholestrol, very mild increase in ALKP, otherwise unremarkable.

BREED

Golden Retriever

RADIOGRAPHIC STUDY OF THE ABDOMEN

Right/left lateral and ventrodorsal views totaling 3 images available for review.

RADIOGRAPHIC FINDINGS

SEX

Male

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

AGE

11 Months

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

St. Catherine's Animal
Hospital

The stomach is post-prandial.

The small intestinal loops are evenly distributed throughout the mid abdomen. No evidence of abnormal content, dilation, or plication is seen.

The colon contains a moderate amount of fecal material.

REFERRING VET

Dr. Bekhit

RADIOGRAPHIC DIAGNOSIS

- Radiographically normal abdomen with post-prandial gastrointestinal tract.

INVOICE

50646

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study is negative for mechanical ileus. The radiographic presentation of the gastrointestinal tract is normal for a post-prandial state.
