

PATIENT

Minka Moon Sadkin

PRESENTING CLINICAL SIGNS

Pet presents for v/d. O reports since Saturday pet's activity level has been on/off. P got a new treat 2 nights ago and vomited yesterday morning, had soft stool. Didn't want to eat much yesterday, ate last night and vomited food this morning, drank water and vomited water multiple x today. No BMs today. Pet lives on barn and eats toys.

SPECIES

Canine

Abnormal PE/Chem/CBC/UA Results: Physical Examination Key -- (N= Normal, A= Abnormal)
 Hydration: ~5% dehydrated Mentation: BAR EENT: No nasal discharge; clear no discharge OU; clean no exudate AU; No cough on tracheal palpation. Oral Cavity: mild dental tartar present
 Lymph Nodes: Symmetrical, no changes in size, shape, consistency Skin: Good hair coat, no signs of ectoparasites. No lesions noted. CV/Respiratory: No murmur or crackles/wheezing auscultated. Synchronous pulses, normal rate. Normal bronchovesicular sounds. Abd/GI: Soft non painful abdomen, no organomegaly, no abnormalities on abdominal palpation Uro/Perineum: N
 Musculoskeletal: Normal ambulation, no lameness noted. BCS 5/9 Neurological: Appropriate

BREED

Australian Shepard Mix

RADIOGRAPHIC STUDY OF THE ABDOMEN

SEX

Female

Right lateral and ventrodorsal views totaling 2 images available for review.

RADIOGRAPHIC FINDINGS

AGE

2 Years, 2 Months

The abdominal serosal detail is maintained.

Dilated intestinal loops with gas content are seen in the cranial abdomen caudal of the stomach. Another dilated loop is seen in the caudal abdomen ventral of the 5th lumbar vertebra.

INTERPRETED BY

Nele Eley, DVM
 Dr. med. Vet. DipECVDI

The stomach presents aerophagia.

The position of the colon and cecum cannot be ascertained likely because the colon is empty.

RADIOGRAPHIC DIAGNOSIS

HOSPITAL NAME

DPC Veterinary Hospital

- Suspect presence of two populations of small bowel.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic findings suggest potential for mechanical ileus with segmental dilation of the small intestine. However, the position of the colon cannot be ascertained and at least part of the dilated loops are in the position of the colon and cecum. Further definition by means of negative contrast irrigogram could be considered in order to identify the position of the colon. Full abdominal ultrasound would be another option for further definition in this patient.
