

## PATIENT PRESENTING CLINICAL SIGNS

Mia Rivera Patient presented for a routine spay procedure. During the ligation of the left ovary, the suture tag was noted on the lateral border of the kidney and there was a concern for ligation of the ureter during the procedure.

## SPECIES

Canine

## COMPUTED TOMOGRAPHIC STUDY OF THE ABDOMEN

Plain and multiple post contrast studies are available for review.

## BREED

Poodle

## COMPUTED TOMOGRAPHIC FINDINGS

Pneumoperitoneum is present consistent with recent surgical procedure.

Small fluid accumulation is present caudal to both kidneys likely representing post-operative changes at ovarian ligation sites.

## SEX

FS

Kidneys and ureters are normal in size, shape and course. No evidence of ligation obstruction or dilation of the ureters is seen. Urinary bladder appears to be normal in size.

## AGE

6yr

No additional intra-abdominal masses are identified.

## COMPUTED TOMOGRAPHIC DIAGNOSIS

- Post-surgical pneumoperitoneum and small fluid collections at ovarian ligation sites.
- Left and right ureters appear patent with no evidence of ligation or obstruction.

## INTERPRETED BY

Nele Eley (Ondreka),  
DVM Dr. med. vet.,  
DipECVDI

## INTERPRETATION OF FINDINGS & FURTHER RECOMMENDATIONS

The findings are consistent with expected post-operative changes following spay. No evidence of ureteral injury or obstruction is seen on CT. Clinical correlation is recommended to monitor for post-operative complications such as urine output changes or hematuria.
