

**PATIENT**

Quiron Giannico

**PRESENTING CLINICAL SIGNS**

Patient showed limping multiple times in a row. Mostly when getting up from naps or running

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE HIND LIMBS**

Lateral and ventrodorsal views of the pelvis, mediolateral and craniocaudal views of the stifles, mediolateral and dorsoplantar views of the hind paws totaling 14 images available for review in jpeg format.

**BREED**

Greyhound

Two regions requested.

**RADIOGRAPHIC FINDINGS**

**SEX**

Male

The pelvic bones present within the expected limits. No evidence of traumatic osseous injury is seen.

The coxofemoral joints present no evidence of dysplasia or osteoarthritis.

The muscle volume of both hind limbs is adequate and symmetric.

**AGE**

3

No evidence of articular swelling of the stifle joints is seen. The subchondral bone surfaces of both stifle joints are smooth and intact. There is no evidence of cranial thrust of the tibia or osteoarthritic changes.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

The tarsal bones present as expected. There is no evidence of abnormal soft tissue swelling in the region of the tibiotarsal and tarsometatarsal joints. The tarsometatarsal joints and phalanges present within normal limits in both hind limbs.

**RADIOGRAPHIC DIAGNOSIS**

- Normal radiographic findings of the pelvis and hind limbs.

**HOSPITAL NAME**

Albany Animal  
Hospital

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic examination of the pelvis and hind limbs reveals no evidence of osseous or articular abnormality. Consider soft tissue trauma or inflammation a potential including neurologic disease.
