

PATIENT

Rooney Dearie

PRESENTING CLINICAL SIGNS

lose stool for few days
Abnormal PE/Chem/CBC/UA Results: elevated BUN and CREA

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Right/left lateral and ventrodorsal whole body views totaling 3 images available for review. Tip of the cranial lung lobe is not fully included.

BREED

Domestic Shorthair

RADIOGRAPHIC FINDINGS

Thorax

Moderate spondyloses are seen within the mid thoracic spine.

SEX

Female Spayed

There is a mild generalized bronchial lung pattern.

Esophageal aerophagia is noted.

AGE

13 Years

The radiographic presentation of the cardiac silhouette is within normal limits.

No abnormal mediastinal widening is noted.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

Abdomen

Moderate spondyloses within the cranial lumbar spine are seen.

The abdominal serosal detail is maintained.

HOSPITAL NAME

St. Catherine's Animal
Hospital

The radiographic presentation of the kidneys and urinary bladder is within normal limits.

The radiographic presentation of the liver and splenic tail is considered within normal limits.

The stomach is post-prandial. Mild gastric aerophagia is noted.

REFERRING VET

Dr. Boctor

The small intestinal loops are evenly distributed throughout the mid abdomen and without evidence of abnormal dilation.

The colon contains a moderate amount of fecal material.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic survey of the abdomen is within the expected limits. Further definition by means of ultrasound could be considered in case of persisting clinical signs to allow for the assessment of the gastrointestinal tract and remainder of the abdominal organs with greater sensitivity.

The bronchial lung pattern may not be of clinical significance; however, suggests potential for chronic lower airway disease such as allergic lower airway syndrome.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
