RADIOGRAPHIC STUDY OF THE PELVIS & STIFLES

SEX

SF

Ventrodorsal hip extended view of the pelvis and mediolateral views of both stifles totaling 3 images available for review.

RADIOGRAPHIC FINDINGS

AGE

6 Years, 3 Months

Patient has a chondrodystrophic skeletal conformation with stunted growth of the long bones.

Pelvis

The coxofemoral joints present within normal limits. Femoral head coverage is considered adequate. The joint spaces are concentric and narrow.

There is no evidence of subluxation, subchondral bone sclerosis, or osteophytosis.

Stifles

The patellae are in situ.

No evidence of articular swelling or cranial thrust of the tibia is seen.

The periarticular margins are even and smooth.

The muscle volume of both hind limbs appears symmetric and adequate.

RADIOGRAPHIC DIAGNOSIS

- Normal radiographic presentation of the pelvis, coxofemoral joints, and stifle joints.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic presentation of the coxofemoral and stifle joints is within normal limits. No evidence of osseous pathology or arthropathy is seen radiographically. Correlation with the clinical presentation recommended.
