PRESENTING CLINICAL SIGNS

48 hr prior went to bed normal and then yesterday woke up with swollen RH limb. Abnormal PE/Chem/CBC/UA Results: Ambulates well in exam room. Tolerant of limb palpation and flexion/extension. significant soft tissue swelling just distal of stifle to just distal of hock.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE TARSI

Mediolateral and dorsoplantar views of both tarsi totaling 3 images available for review.

BREED

Dachshund

RADIOGRAPHIC FINDINGS

The patient has a bilateral pes varus which is common in Dachshunds.

SEX

Female

Moderate soft tissue swelling is seen circumferential to the distal right tibia, fibula, and tarsal joint. No evidence of osseous injury, subluxation, articular swelling, or joint luxation is seen.

AGE

11 Years

RADIOGRAPHIC DIAGNOSIS

- Soft tissue swelling circumferential to the distal right hind limb with no evidence of articular or osseous injury.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals soft tissue swelling with no evidence of articular or bone involvement in the distal right hind limb accentuating the tarsal region. Primary differential diagnosis is soft tissue trauma or inflammation.

Presence of perforating injury and/or septic cellulitis should be ruled out.
