

PATIENT PRESENTING CLINICAL SIGNS

Luca Sweren Possible polyps

COMPUTED TOMOGRAPHIC STUDY OF THE HEAD

SPECIES Plain and post contrast studies available for review.

Feline

COMPUTED TOMOGRAPHIC FINDINGS

BREED

Domestic Shorthair

The brain presents no deviation from normal anatomy and symmetry. The grey and white matter distinction and the neuroparenchymal attenuation are as expected. The distribution of contrast enhancement is within normal limits throughout the parenchyma and meninges. The ventricular system is non-dilated and within the limits of the expected volume and symmetry.

SEX

Neutered Male

Thin and smoothly folded conchae and turbinates with even smooth mucosal lining.

Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

AGE

8 Years

Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external auditory meatuses present within normal limits.

The submandibular and medial retropharyngeal lymph nodes are small and elongated with a normal short-to-long-axis-ratio is < 0.5, the attenuation and contrast enhancement pattern is uniform.

INTERPRETED BY

Nele Eley (Ondreka),
DVM Dr. med. vet.,
DipECVDI

The salivary glands present within normal limits.

All dental elements have been removed.

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Structurally normal CT study of the nasal passages, middle ear, nasopharynx, and ear canals.

HOSPITAL NAME

Mobile Pet Imaging

INTERPRETATION OF FINDINGS & FURTHER RECOMMENDATIONS

No evidence of structural pathology is seen in the nasal passages, paranasal sinuses, middle ear, and ear canals. The nasopharyngeal lumen is patent and wide. At this time, there is no evidence of otitis media or externa. The regional lymph nodes are within normal limits.
