

**PATIENT**

Baby Girl  
Inchaurregui

**PRESENTING CLINICAL SIGNS**

Few weeks history of polydypsia, hyporexia, weak in rear limbs, swollen distal rear extremities, and mammary masses.  
Abnormal PE/Chem/CBC/UA Results: PE: 2 caudal mammary masses, inguinal lymphadenopathy, stifel OA, TL spinal tension and pain, muscle atropy of spine and rear legs, mild distal rear limb swelling, fractured 204  
CBC: Normal Chem: Normal UA: SG 1.006, pH 6.5, Quiet Sediment.

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE THORAX**

**BREED**

Pitbull

Right/left lateral and ventrodorsal views of the thorax totaling 3 images available for review.

**RADIOGRAPHIC FINDINGS**

**SEX**

FS

The lungs are well inflated. A mild generalized bronchointerstitial lung pattern is noted and evenly distributed throughout the lung. There appear to be at least 3 soft tissue opaque interstitial pulmonary nodules within the right cranial and right caudal lung lobe. Multiple age related incidental pulmonary osteomas are seen.

Course and width of the trachea are considered within normal limits.

**AGE**

13 Years, 3 Months

The vertebral heart score is 9.8. No specific chamber enlargement of the cardiac silhouette is suggested by the radiographic appearance of the cardiac silhouette.

There is no evidence of abnormal mediastinal widening.

Moderate spondyloses are seen within the thoracolumbar junction and cranial lumbar spine.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

**RADIOGRAPHIC DIAGNOSIS**

- Multiple nodular interstitial lung pattern.
- Multiple spondyloses.

**HOSPITAL NAME**

Elizabeth Animal  
Hospital

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study reveals a nodular interstitial lung pattern. The interstitial pulmonary nodules are highly likely to represent metastases especially in light of the patient history. Granulomatous lung disease can never be ruled out entirely but is thought by far less likely. The findings should be considered positive for metastases until proven otherwise.
