

**PATIENT PRESENTING CLINICAL SIGNS**

Chip Mikhow  
 Vomiting for 2 days  
 Abnormal PE/Chem/CBC/UA Results: bloodwork unremarkable

**SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN**

Feline  
 Right/left lateral and ventrodorsal whole body views totaling 3 images available for review.

**RADIOGRAPHIC FINDINGS**

**BREED Abdomen**

DSH  
 The stomach is post-prandial.

**SEX**

Male Neutered  
 The small intestinal loops are evenly distributed throughout the mid abdomen. A mildly discrepant gas pattern is noted; however, there is no evidence of abnormal dilation, plication, or radiopaque foreign material.

The colon contains a moderate amount of inspissated fecal matter.

**AGE**

5 Years

**Thorax**

The surrounding bony structures are within normal limits.

**INTERPRETED BY**

Nele Eley, DVM  
 Dr. med. Vet. DipECVDI

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

**HOSPITAL NAME**

St. Catherine's Animal  
 Hospital

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

**REFERRING VET**

Dr. Boctor

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

**INVOICE**

51587

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**RADIOGRAPHIC DIAGNOSIS**

**DATE**

4-18-22

- Small intestinal maldigestion pattern.
- Radiographically normal thorax.

**PATIENT**

Chip Mikhow

**SPECIES**

Feline

**BREED**

DSH

**SEX**

Male Neutered

**AGE**

5 Years

**INTERPRETED BY**

**HOSPITAL NAME**

St. Catherine's Animal  
Hospital

**REFERRING VET**

Dr. Boctor

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The gas pattern within the small intestine may be within normal post-prandial limits. However, gastroenteritis or other GI pathology with functional ileus including pancreatopathy cannot be ruled out and further definition by means of abdominal ultrasound could be considered depending on the severity and development of the clinical signs.
