

PATIENT

Lucky Contreras

PRESENTING CLINICAL SIGNS

history of limping on right front leg. on physical exam, no obvious abnormality. Palpating spine within normal limit. Rule out arthritis vs disc problem.

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE THORACOLUMBAR SPINE & RIGHT SHOULDER

Lateral and orthogonal views of the thoracolumbar spine and mediolateral and craniocaudal views of the right shoulder totaling 6 images available for review.

BREED

Domestic Shorthair

RADIOGRAPHIC FINDINGS

Right Shoulder

The radiographic presentation of the right shoulder is within age related normal limits. No evidence of aggressive bone lesions or traumatic osseous injury is seen.

SEX

Male Neutered

The right elbow presents within normal limits as well.

AGE

5 Years

Thoracolumbar Spine

Number, alignment, and general anatomy of the thoracolumbar vertebrae present within normal limits.

Moderate ventrally bridging spondylosis deformans is noted between T11 and T12. There is no evidence of traumatic osseous injury, discospondylitis, or aggressive bone lesions.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

RADIOGRAPHIC DIAGNOSIS

- Spondylosis deformans T11/12 - otherwise, normal radiographic presentation of the thoracolumbar spine.
- Normal radiographic presentation of the right shoulder.

HOSPITAL NAME

Truscott Animal
Hospital

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No evidence of osseous or articular pathology is noted in the right front limb that would explain the patient's clinical signs.

REFERRING VET

Medhat Meawad

Moderate spondylosis deformans is present between T11 and T12. The radiographic presentation of the thoracolumbar spine is within normal limits otherwise.
