

**PATIENT PRESENTING CLINICAL SIGNS**

Mew Three Wrigley Chronic UTIs and hematuria despite medical management.

COMPUTED TOMOGRAPHIC STUDY OF THE ABDOMEN**SPECIES**

Feline

Plain and post contrast studies available for review.

COMPUTED TOMOGRAPHIC FINDINGS**BREED**

DSH

The serosal fat presents normal attenuation behavior. There is no evidence of peritoneal effusion or peritonitis.

SEX

Spayed Female

Both kidneys present within normal limits for size, shape and organ architecture. There is no evidence of pyelectasia or hydroureter. The position of the ureteral papillae is within normal limits on both sides. After contrast administration a bilaterally symmetric and uniform nephro- and pyelogram is noted.

The CT presentation of the urinary bladder is within normal limits.

The adrenal glands are within normal limits for size, shape and organ architecture.

AGE

2 Years

Both liver and spleen present with normal shape, even surface, uniformly attenuating parenchyma and homogeneous contrast enhancement, unremarkable.

The pancreas is evenly contoured, the pancreatic parenchyma is homogeneous and presents uniform contrast enhancement.

INTERPRETED BY

Nele Eley (Ondreka),
DVM Dr. med. vet.,
DipECVDI

The position, delineation, wall and content of the gastrointestinal tract are considered within normal limits throughout.

The bony and surrounding soft tissue structures reveal no abnormalities.

HOSPITAL NAME

Mobile Pet Imaging

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Normal CT findings of the abdomen.

INTERPRETATION OF FINDINGS & FURTHER RECOMMENDATIONS**REFERRING VET**

Meaux

The CT study reveals no evidence of ureteral ectopia. Presence of urinary calculi is not noted. There is no evidence of a portosystemic shunt or other congenital malformation that could explain the recurrent UTIs. However, endocrine such as diabetes, metabolic, stress induced, or dietary causes of the lower urinary tract disease are potential considerations that remain a potential even with negative CT findings.
