

**PATIENT**

Rocco Ferguson

**PRESENTING CLINICAL SIGNS**

seems slow and off balance, lethargic  
Abnormal PE/Chem/CBC/UA Results: BW unremarkable cPL : 127 : normal 0-125.

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

Right lateral and ventrodorsal views of the abdomen totaling 2 images available for review.

**BREED**

German Shepherd  
Mix

**RADIOGRAPHIC FINDINGS**

The abdominal serosal detail appears to be reduced caudal to the stomach.

The stomach is post-prandial.

The small and large intestine present within normal limits.

**SEX**

Male Neuter

Mild generalized enlargement of the liver with slightly rounded lobar margins is noted.

The visible osseous structures present within normal age related limits.

**AGE**

7 Years

**RADIOGRAPHIC DIAGNOSIS**

- Post-prandial stomach.
- Mild reduced serosal detail in the cranial abdomen.
- Mild hepatomegaly.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The mildly reduced serosal detail in the cranial abdomen caudal to the stomach may be due to crowding of the abdominal viscera. However, regional peritonitis or effusion due to pancreatopathy or other cannot be ruled out entirely. Correlate with the laboratory values and consider abdominal ultrasound for further definition if indicated.

**HOSPITAL NAME**

St. Catherine's Animal  
Hospital

The enlargement of the liver is mild and suggests potential for metabolic / endocrine hepatopathy. Diffuse inflammation/infection or diffuse infiltrative disease cannot be ruled out.
