**COMPUTED TOMOGRAPHIC DIAGNOSIS**

- Incomplete dentition
- FORL triadan 308
- Horizontal atrophy of the alveolar crest in all quadrants.
- Left sided otitis externa.

**HOSPITAL NAME**

South Bay Animal  
Hospital & Pet Resort

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Extensive FORL defects are seen associated with the dental neck and crown of the triadan 308. The presence of smaller FORL lesions cannot be ruled out and the CT findings should always be correlated with the clinical workup and dental radiographs as available to screen for additional FORL defects with greater sensitivity.
