

**PATIENT**

Marty Coote

**PRESENTING CLINICAL SIGNS**

limping on LH  
Abnormal PE/Chem/CBC/UA Results: unremarkable

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE PELVIS & LEFT STIFLE**

Ventrodorsal view of the pelvis and mediolateral view of the left stifle totaling 2 images available for review in jpeg format.

**BREED**

DSH

**RADIOGRAPHIC FINDINGS**

Mild soft tissue emphysema is seen medial to the right stifle and considered iatrogenic.

Mild atrophy of the left hind limb musculature is noted.

**SEX**

Female Spayed

The radiographic presentation of the pelvic bones and coxofemoral joints is within normal limits.

No lumbosacral junction abnormality is seen.

**AGE**

13 Years

There is no evidence of significant articular swelling of the left stifle joint. Mild osseous remodeling of the periarticular margins and patella is considered within age related normal limits. The tibiotarsal joint and achilles tendon present within the expected limits.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

**RADIOGRAPHIC DIAGNOSIS**

- Normal age related findings of the pelvis and left stifle joint.
- Mild atrophy of the left hind limb musculature.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic presentation of the coxofemoral joints, pelvis, and left stifle joint is within age related normal limits.

Atrophy of the left hind limb musculature is noted and may be secondary to disuse or neurogenic. Consider neurologic disease as well as soft tissue trauma or inflammation as potential underlying causes of the patient's clinical signs.
