RADIOGRAPHIC STUDY OF THE ABDOMEN

Right lateral and ventrodorsal views totaling 2 images available for review.

RADIOGRAPHIC FINDINGS

AGE

6 Years

The abdominal serosal detail is maintained throughout.

The kidneys and urinary bladder present within normal limits.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The liver and spleen present within normal limits.

There is a mild amount of gas present within the stomach.

The small intestinal loops are evenly distributed throughout the mid abdomen with no evidence of abnormal dilation, plication, or radiopaque foreign material.

HOSPITAL NAME

DPC Veterinary
Hospital

The colon contains a moderate amount of fecal matter. The cecum is seen ventral to the mid lumbar spine and presents gas content which is a normal finding.

RADIOGRAPHIC DIAGNOSIS

REFERRING VET

Dr. White

- Radiographically normal abdomen.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study is negative for mechanical ileus. The abdominal serosal detail appears to be maintained. Functional ileus, gastroenteritis, pancreatopathy, and other still remain a potential. Consider further definition by means of abdominal ultrasound in case of persisting or deteriorating clinical signs.
