

PATIENT PRESENTING CLINICAL SIGNS

Ty Moreira not himself as per O. meowing a lot, seems in pain. PE is not significant findings, other than some scattered radio-opaque substances in the stomach

SPECIES RADIOGRAPHIC STUDY OF THE ABDOMEN

Feline Right/left lateral and ventrodorsal view of the abdomen and right lateral whole body view totaling 5 images available for review.

BREED Abdominal read requested.

Domestic Shorthair RADIOGRAPHIC FINDINGS

The abdominal serosal detail is maintained.

SEX The liver and splenic head present within normal limits.

Male Neutered Both kidneys are relatively small but present normal in terms of their shape and opacity.

AGE The stomach is filled with mixed soft tissue and gas opaque material. Multiple small mineral opacities are distributed throughout the gastric content.

19 Years Multiple small gas bubbles are seen within the small intestinal lumen. The small intestinal loops are evenly distributed throughout the mid abdomen. The appearance of the small intestinal wall is thick walled even though this is an inaccurate radiographic measure.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

A moderate amount of inspissated fecal matter is seen in the descending colon.

The visible skeletal structures present mild generalized osteopenia.

HOSPITAL NAME A thoracolumbar transitional vertebra is seen which is an incidental finding.

Truscott Animal
Hospital

RADIOGRAPHIC DIAGNOSIS

- Gastrointestinal maldigestion pattern.
- Possibly symmetrically reduced size of both kidneys.
- Constipation.
- Age related osteopenia.
- Incidental transitional vertebra.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE

51387

A specific underlying cause of the patient's clinical signs cannot be identified in the abdomen.

DATE

4-6-22

A gastrointestinal maldigestion pattern is seen as well as constipation. The small mineral opacities within the stomach may well represent ingested litter. Consider the possibility of diffuse small intestinal disease which, however, would require further verification by means of ultrasound. Consider the possibility of chronic renal disease which can be masked by hypertensive states. Correlate with the laboratory values including t4 levels.

PATIENT

Ty Moreira

Please note the presence of esophageal dilation with gas seen in the included portion of the thorax.
