

PATIENT

Thumper Zeeshan

PRESENTING CLINICAL SIGNS

history of sneezing on/off - especially the R nostril as per O, in night always hear wheezing no abnormalities on chest or heart or skull tissues check chest and thymus

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE SKULL, NECK, & THORAX

Right/left lateral and orthogonal views of the skull and thorax totaling 8 images available for review.

BREED

Domestic Shorthair

RADIOGRAPHIC FINDINGS

Thorax

The surrounding bony structures are within normal limits.

SEX

Male Neutered

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

11 Months

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME

Truscott Animal
Hospital

The lungs are deeply inflated. The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

REFERRING VET

Medhat Meawad

Head & Neck

No evidence of aggressive bone lysis is seen in the skull.

The nasal cavities, frontal, and presphenoidal sinuses appear to be aerated as appropriate. There is no evidence of turbinate destruction.

INVOICE

52087

The tympanic bullae present within normal limits.

Course and width of the cervical trachea and laryngeal structures as well as of the hyoid bone are considered within normal limits.

DATE

**PATIENT**

Thumper Zeeshan

RADIOGRAPHIC DIAGNOSIS

- Normal radiographic findings of the skull and thorax.

SPECIES

Feline

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic presentation of the skull, lung, bronchial tree, and cardiac silhouette are considered within age related normal limits.

BREED

Domestic Shorthair

Nondestructive rhinitis, acute tracheitis, or tracheobronchitis cannot be ruled out since the radiographic findings typically lag behind the clinical course of the disease, however, at this time, no signs of chronic inflammation or infection can be detected radiographically.

SEX

Male Neutered

AGE

11 Months
