

PATIENT

Jake Graham

PRESENTING CLINICAL SIGNS

vomiting since Sunday , not eating , lethargic
Abnormal PE/Chem/CBC/UA Results: moderate abdominal discomfort , BW indicated sever elevation of PLI , ALP, hypokalemia

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

Right/left lateral and ventrodorsal views totaling 3 images available for review.

BREED

Retriever, Golden

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

SEX

Male Neuter

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

AGE

10 Years

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is post-prandial.

HOSPITAL NAME

St. Catherine's Animal
Hospital

The small intestinal loops are turgid in appearance with segmental gas pattern; however, no evidence of abnormal dilation, plication, or radiopaque foreign material is seen.

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

REFERRING VET

Dr. Masoud

- Gastrointestinal maldigestion pattern - no radiographic evidence of mechanical ileus.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE

52102

The radiographic findings are suggestive for functional gastrointestinal ileus. Subileus cannot be ruled out entirely. No evidence of complete mechanical ileus is seen. The abdominal serosal detail is maintained. Consider gastroenteropathy, pancreatopathy, hepatopathy, and other potential differential diagnoses. Further definition by means of abdominal ultrasound could be considered if not performed already in case of persisting clinical signs.
