

**PATIENT PRESENTING CLINICAL SIGNS**

Sammie Chee Lameness in RF leg? Owner not sure, but may be in the leg that was operated on. On rads, we see that he's had fracture repair of the LF leg.  
 Abnormal PE/Chem/CBC/UA Results: Hx of food allergies.

**SPECIES RADIOGRAPHIC STUDY OF THE ELBOWS & FOREARMS**

Canine Mediolateral and craniocaudal views of both elbows and forearms totaling 6 images available for review.

**BREED RADIOGRAPHIC FINDINGS**

Poodle Patient has a history of open reduction and internal fixation of a left diaphyseal radial fracture with an LCP plate.

**SEX** Fracture healing is completed. The fracture is in the remodeling phase. Implants are intact and in situ. No significant soft tissue swelling, or bone loss is seen associated with the implant and fractured area.  
 MN

**AGE** The joint spaces of the left elbow joint are congruent. There is no evidence of coronoid pathology, osteochondritis, articular swelling, or osteoarthritis.

8 Years The carpal joint presents within normal limits.

**INTERPRETED BY** The osseous and articular structures of the right elbow and right forearm present within normal limits as well. There is no evidence of abnormal soft tissue swelling, medial coronoid disease, osteochondritis, osteoarthritis, or traumatic osseous injury.
