

**PATIENT**

Aster Akasha

**PRESENTING CLINICAL SIGNS**

Patient presented for vomiting once a day for the last 4 days. Owner states no new changes in food although pet has been known to steal toast with butter off the counter. Pet is still willing to eat. Mild discomfort on abdominal palpation. In march ingested ribbons, o has not seen him ingest anything else since then

**SPECIES**

Feline

Abnormal PE/Chem/CBC/UA Results: No bloodwork performed

**RADIOGRAPHIC STUDY OF THE ABDOMEN**

**BREED**

Ragdoll

Right/left lateral and ventrodorsal views totaling 3 images available for review.

**RADIOGRAPHIC FINDINGS**

**SEX**

MN

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

**AGE**

3.52 Years

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic tail is not seen.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

**HOSPITAL NAME**

Boca Park Animal  
Hospital

The stomach is empty.

The small intestinal loops are evenly distributed throughout the mid abdomen. No plication and no abnormal dilation is seen. There is no evidence of radiopaque foreign material. A segmental gas pattern is noted.

**REFERRING VET**

Dr. Corinna Gorgon

The colon contains gas and a moderate amount of inspissated fecal matter.

**RADIOGRAPHIC DIAGNOSIS**

- No radiographic evidence of mechanical ileus.
- Gastrointestinal maldigestion pattern.

**INVOICE**

52898

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**DATE**

7-14-22

The radiographic study reveals no signs of mechanical ileus. Subileus and functional ileus are considered likely. Linear foreign material cannot (never) be ruled out entirely based on radiographs. Consider further definition by means of abdominal ultrasound in case of persisting or deteriorating clinical signs.
