

PATIENT

Buddy Brauchle

PRESENTING CLINICAL SIGNS

Coughing Increased heart rate

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Single right lateral view available for review.

BREED

Havanese

RADIOGRAPHIC FINDINGS

Significant ventral deviation of the cervical tracheal membrane is seen. Visibility of the dorsal tracheal wall appears to be maintained.

SEX

Male/Neutered

The degree of pulmonary inflation is moderate. A moderate generalized bronchial lung pattern is noted and evenly distributed throughout the lung.

There is no evidence of mediastinal lymphadenomegaly or other mediastinal widening.

AGE

8 Years

No evidence of cardiomegaly or specific chamber enlargement is noted. The vertebral heart score is 10.4. No evidence of a vascular lung pattern is noted.

RADIOGRAPHIC DIAGNOSIS

- Redundancy dorsal tracheal ligament.
- Moderate bronchial lung pattern.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Redundancy of the dorsal tracheal ligament can be an incidental finding however it can be associated with dynamic tracheal collapse which appears to be one potential cause of the patient's clinical signs.

HOSPITAL NAME

New Bridge
Veterinary Practice

The bronchial lung pattern may reflect age related changes. Chronic lower airway disease such as eosinophilic, irritant bronchopneumopathy, or infectious bronchitis cannot be ruled out entirely. Other systemic disease may cause the increased heart rate though and full internal medicine workup should be considered.
