

PATIENT

Cooper Flieger

PRESENTING CLINICAL SIGNS

P presented today to remove a 1.4x1.7x cm firm subcutaneous mass on the back. CT performed mass removal for metastasis check.

SPECIES

Canine

COMPUTED TOMOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Plain study of the thorax and plain and post contrast studies of the abdomen are available for review.

BREED

Golden Retriever

COMPUTED TOMOGRAPHIC FINDINGS

Thorax

Mild T9/10 spondylosis deformans is noted.

SEX

MN

The sternal, cranial mediastinal and tracheobronchial lymph nodes are small elongated with a normal short-to-long-axis-ratio.

The cardiovascular structures including the pulmonary vasculature are within normal limits.

AGE

6 Years

The bronchial tree presents with regular branching and tapers uniformly towards the periphery as expected, the bronchial walls are thin and smooth. The bronchus-to-artery ratio is within normal limits.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The lung parenchyma presents the expected architecture and attenuation behavior. No evidence of interstitial pulmonary nodules or masses is seen.

Small incidental gas pockets are seen within the esophageal lumen, there is no evidence of abnormal dilation.

HOSPITAL NAME

Catskill Veterinary
Services, PLLC

Abdomen

The patient's body condition score is mildly excessive.

The serosal fat presents normal attenuation behavior. There is no evidence of peritoneal effusion or peritonitis.

REFERRING VET

Dr. Lindsey Green

Both kidneys present within normal limits for size, shape and organ architecture. After contrast administration a bilaterally symmetric and uniform nephro- and pyelogram is noted.

The adrenal glands are within normal limits for size, shape and organ architecture.

INVOICE

59219

Both liver and spleen present with normal shape, even surface, uniformly attenuating parenchyma and homogeneous contrast enhancement, unremarkable.

DATE

7-6-23

The pancreas is evenly contoured, the pancreatic parenchyma is homogeneous and presents uniform contrast enhancement.

The position, delineation, wall and content of the gastrointestinal tract are considered within normal limits throughout.

PATIENT

Cooper Flieger

Moderate L1/2 and L2/3 spondylosis deformans is seen.

Mild degenerative lumbosacral stenosis is noted.

SPECIES

Canine

The subcutaneous mass mentioned in the patient history does not appear to be included in the collimated field of view.

COMPUTED TOMOGRAPHIC DIAGNOSIS

BREED

Golden Retriever

- Normal age related CT findings of the thorax and abdomen.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT screening of the thorax and abdomen is negative for metastatic disease. The bronchopulmonary and cardiovascular structures present within normal limits. No evidence of abdominal masses, organomegaly, parenchymal nodules, or other structural pathology is seen. The thoracic and abdominal lymph nodes present within normal limits.

SEX

MN

AGE

6 Years
