RADIOGRAPHIC STUDY OF THE SKULL

BREED

Schnauzer

Lateral open mouth views, dorsoventral, and rostrocaudal open mouth views totaling 5 images available for review.

RADIOGRAPHIC FINDINGS

SEX

The nasal cavities and frontal sinuses present within normal limits.

MN

The tympanic bullae present within normal limits.

No evidence of temporomandibular joint pathology is seen.

AGE

3 Years

The maxillae and mandibles present within normal limits. The last mandibular molar appears to be absent in one of the mandibular quadrants.

The general bone structure of the skull presents within age related normal limits.

The craniocervical junction is within normal limits.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

RADIOGRAPHIC DIAGNOSIS

- Normal radiographic presentation of the skull.

HOSPITAL NAME

Green Dog Dental and
Wellness

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the skull does not reveal evidence of traumatic or other osteopathy within the maxillary and mandibular quadrants. One of the last mandibular molar teeth is absent in one of the quadrants and the dental alveolus appears to be filled with bone. No signs of significant periodontal disease are seen.
