

**PATIENT**

Aoli Wang

PRESENTING CLINICAL SIGNS

bloody diarrhea for few days , not eating and lethargic
Abnormal PE/Chem/CBC/UA Results: Moderate abdominal pain , blood work unremarkable

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

Right/left lateral and ventrodorsal views of the abdomen totaling 3 images available for review in jpeg format. The left lateral view is labeled as right lateral.

BREED

Bichon Frise

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

SEX

Male

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

AGE

3

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Mild prostatic enlargement with no mass effect is seen.

HOSPITAL NAME

Lakeshore Woods
Animal Hospital

The gastrointestinal tract is mostly empty. A mild amount of gas is seen within the stomach and descending duodenum as well as within the descending colon. The remainder of the intestinal loops are evenly distributed throughout the mid abdomen. No evidence of malpositioning, mass effects, abnormal dilation, plication, or radiopaque foreign material is seen.

RADIOGRAPHIC DIAGNOSIS**REFERRING VET**

Dr. Sam Masoud

- Gastrointestinal maldigestion pattern – no radiographic evidence of mechanical ileus.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**INVOICE**

53218

The radiographic findings do suggest potential for functional ileus. No radiographic evidence of mechanical ileus is seen. Further definition by means of abdominal ultrasound could be considered in case of persisting or deteriorating clinical signs.
