

**PATIENT**

Teddy De Adder

**PRESENTING CLINICAL SIGNS**

Coughing for Two weeks ago

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE THORAX & NECK**

Right/left lateral and ventrodorsal whole body views totaling 3 images available for review.

Thoracic and neck read requested.

**BREED**

Poodle Miniature

**RADIOGRAPHIC FINDINGS**

A mild generalized bronchointerstitial lung pattern is noted and evenly distributed throughout the lung.

**SEX**

Male

Course and width of the trachea are considered within normal limits.

No evidence of mediastinal widening is seen. A small thymic remnant is seen in the cranioventral mediastinum.

**AGE**

16 Weeks

The vertebral heart score is 9.6 and within the reference range. No evidence of a vascular lung pattern or cardiogenic pulmonary edema is noted.

**RADIOGRAPHIC DIAGNOSIS**

- Mild generalized bronchointerstitial lung pattern.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study suggests potential for acute lower respiratory tract infection such as infectious tracheobronchitis. Viral, bacterial, or mixed infection is thought most likely. Parasitic infection cannot be ruled out entirely. The possibility of eosinophilic bronchopneumopathy cannot be ruled out as well but is thought less likely in light of the patient's age.
