

**PATIENT**

Neo Yu

PRESENTING CLINICAL SIGNS

chronic vomiting, underweight
Abnormal PE/Chem/CBC/UA Results: bile acids pending

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

2 right lateral views of the abdomen available for review.

BREED

Italian Grey Hound

RADIOGRAPHIC FINDINGS

The patient is in very thin body condition.

The kidneys and urinary bladder are considered within normal limits.

SEX

Male

The splenic tail is contained within the ribcage in this very deep chested dog.

The liver size is considered within normal limits.

AGE

11 Months

The gastrointestinal tract is largely empty. No evidence of abnormal dilation, plication, or radiopaque foreign material is seen throughout the gastrointestinal tract.

RADIOGRAPHIC DIAGNOSIS

- Radiographically normal abdomen with empty gastrointestinal tract.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No structural pathology can be identified within the abdomen. The gastrointestinal tract is empty. No evidence of ileus or mass effect is seen. Based on the chronicity of the changes, consider further definition by means of ultrasound in order to obtain more detailed information about the gastrointestinal tract's wall layering and motility as well as the associated organs and correlate with the laboratory workup.
