

**PATIENT**

Jack Vikara

PRESENTING CLINICAL SIGNS

Patient presented for acute onset right forelimb lameness and swelling.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE CARPI

Dorsopalmar and mediolateral views of the right carpus and dorsopalmar view of the left carpus totaling 4 images available for review in jpeg format.

BREED

Rottweiler

Only jpg images were submitted. The transformation from DICOM to jpg only allows for limited manipulation of the image. For the best possible results, we suggest submitting DICOM images in the future. Please do not hesitate to contact us should you need any help with the submission process.

RADIOGRAPHIC FINDINGS**SEX**

MN

Moderate swelling is seen medial to the right antebrachial joint in the position of the abductor pollicis longus tendon and its tendon sheath. There is a moderate amount of smooth new bone emerging from the sulcus within the medial and distal aspect of the right radius.

AGE

4.5 Years

Mild generalized swelling of the soft tissues circumferential to the right front paw appears to be present and accentuated in the lateral aspect.

The antebrachiocarpal and intercarpal joints present within normal limits.

INTERPRETED BYNele Eley, DVM
Dr. med. Vet. DipECVDI

The left carpus presents within normal limits.

RADIOGRAPHIC DIAGNOSIS

- Chronic right abductor pollicis longus tenosynovitis.
- Unspecific soft tissue swelling circumferential to the right front paw accentuated in the lateral aspect.

HOSPITAL NAMENorth Warren Animal
Hospital**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study reveals no evidence of traumatic osseous or articular injury in the right front paw. Radiographic evidence of chronic abductor pollicis longus tenosynovitis is seen in the right front paw which, however, does not appear to correlate with the acute history of the current clinical signs.

REFERRING VET

Dr. Samantha Bociulis

There appears to be additional soft tissue swelling accentuated in the lateral aspect of the right front paw which may represent soft tissue trauma or inflammation. Clinical correlation is required.
