RADIOGRAPHIC DIAGNOSIS

- Exophthalmos.
- Regional osteopenia within the left caudal maxilla.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Differential diagnosis includes chronic dental disease with tooth root abscessation such as P4 fistula as well as retrobulbar mass effect with a differential diagnoses of orbital cellulitis, abscess, and less likely neoplasia. No evidence of aggressive osteolytic lesions is seen. Consider dental revision and further definition by means of cross sectional imaging should this be inconclusive.
