

PATIENT

Beau Denouden

PRESENTING CLINICAL SIGNS

Back in March P had issues with acute lameness in LTL but seemed to go away after one injection of Adequan. Acute lameness has returned over the last few days. Gave Solensia and completed a laser therapy session on 8/11/23 with some improvement of clinical signs. VIC ultrasounded this patient's shoulder for practice and has no experience with orthopedic scans

ULTRASONOGRAPHIC STUDY OF THE BILATERAL SHOULDERS

Limited study.

BREED

Longhair Domestic

ULTRASONOGRAPHIC FINDINGS

A standardized protocol was not used.

SEX

Spayed Female

The available still images (20) and loops (41) of the left and right shoulder show normal muscle, tendon, and bone structure in the region of the right and left shoulder. No evidence of structural soft tissue pathology is seen.

ULTRASONOGRAPHIC DIAGNOSIS

- Open
- Normal ultrasonographic presentation of the musculature, tendons, and bone surfaces in the left and right shoulder region.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Evidence of soft tissue, bone, or articular pathology was not found in the submitted image material. I recommend to correlate with the radiographic and clinical findings. Using a standardized protocol could be considered, especially when addressing specific orthopedic questions in the shoulder or other regions.
