

PATIENT

Darla Mahrt

PRESENTING CLINICAL SIGNS

Patient presented for recheck exam for discharge from nose and sneezing/wheezing for a week now. Pet was started on doxycycline which initially helped but pet worsened. Still eating and drinking but o feels like pet is more lethargic

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Right/left lateral and ventrodorsal views totaling 3 images available for review.

BREED

Poodle Mix

RADIOGRAPHIC FINDINGS

A mild generalized bronchial lung pattern accentuating the caudal lung field is seen.

SEX

FS

Mild tortuosity of the caudal pulmonary vessels is seen. No obvious changes of the cardiac silhouette are noted. The vertebral heart score is 10.4.

Course and width of the trachea are considered within normal limits.

No mediastinal widening is seen.

AGE

3 Years

RADIOGRAPHIC DIAGNOSIS

- Caudodorsally accentuated bronchial lung pattern.
- Mild vascular lung pattern.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic findings are compatible with lower airway disease. Based on the clinical history of the patient, viral and parasitic infection as well as allergic bronchopneumopathy appear to be more likely than bacterial bronchitis. However, the possibility of upper airway involvement triggering the clinical disease should be considered.
