

PATIENT

Kelly Walker

PRESENTING CLINICAL SIGNS

coughing , gaging , with rest or exercise , increased in frequency in the last few days , +/- puke , sever gingivitis and teeth tartar .

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Right/left lateral and ventrodorsal views of the thorax totaling 4 images available for review in jpeg format.

BREED

Terrier Yorkshire Mix

RADIOGRAPHIC FINDINGS

There is no evidence of cervical or thoracic tracheal collapse.

The lung and bronchial tree present within age related normal limits.

SEX

Male Neuter

No generalized cardiomegaly and no specific chamber enlargement is noted. The pulmonary vasculature and caudal vena cava present within normal limits.

No evidence of mediastinal widening is seen.

AGE

9 Years

Mild T4/5 spondylosis deformans is seen.

RADIOGRAPHIC DIAGNOSIS

- Normal age related thorax.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals no evidence of cardiovascular pathology, and no significant bronchopulmonary changes are noted. There is no evidence of dynamic tracheal disease. Consider the possibility of upper airway pathology such as laryngitis, tracheitis, as well as acute bronchopulmonary disease which radiographic changes may lag behind the clinical course of the disease, however at this point, no notable changes are present.
