

**PATIENT**

Zuzu Hunter

**PRESENTING CLINICAL SIGNS**

Pet has been lethargic with decreased appetite, and not drinking water. Meow sounds very different per owner. PE- normal exam other than fever of 103.5, CBC/Chem/T4 normal on 7-26-2021

Abnormal PE/Chem/CBC/UA Results: CBC/Chem/T4 normal on 7-26-2021

**SPECIES**

Feline

**RADIOGRAPHIC STUDY OF THE THORAX**

Right lateral and ventrodorsal views of the thorax totaling 3 images available for review.

**BREED**

DLH

**RADIOGRAPHIC FINDINGS**

Number, alignment, and general anatomy of the cervical vertebrae present within normal limits.

Isolated ossicles are seen distal of the medial humeral epicondyles in both front limbs and considered incidental.

**SEX**

Spayed Female

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

**AGE**

5 Years

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

Visible parts of the laryngeal structures present within normal limits.

The course and width of both the cervical and intrathoracic trachea present within normal limits. The luminal outline of the trachea is smooth.

**HOSPITAL NAME**

Paws and Claws  
Urgent Care

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

**REFERRING VET**

Dr. Bradshaw

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Mineral opaque structures are seen level with the renal diverticuli of both kidneys.

**INVOICE**

46920

**RADIOGRAPHIC DIAGNOSIS**

- Radiographically normal thorax and neck.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS****DATE**

8-9-21

The radiographic findings of the thorax and neck are within age related normal limits. No evidence of structural tracheal, bronchopulmonary, or cardiovascular pathology is seen radiographically which however does not rule out functional abnormality in the upper airways such as the larynx and trachea.
