PRESENTING CLINICAL SIGNS

Jilly was presented for evaluation of inappetence and vomiting EDUD normally V/D: vomited last night one hour after dinner and this morning at 11am. No known dietary indiscretion. Owner does have an avocado tree in the back yard. She has been known to eat the skin and flesh but not the pits. The owners did find an avocado that had been eaten but the skin and pit were left. No diarrhea. Drinking unchanged Energy levels are normal Appetite: decreased, last meal 10pm but v right after Current diet: Spot and Tango freeze dried beef, 2x times a day

RADIOGRAPHIC STUDY OF THE ABDOMEN

Right/left lateral and ventrodorsal views of the abdomen totaling 3 images available for review.

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach contains a mild amount of gas. No abnormal gastric content can be detected.

The small intestinal loops are evenly distributed throughout the mid abdomen. There is no evidence of abnormal dilation or radiopaque foreign material.

The cecum and colon are seen in their anticipated positions and mostly empty except for gas and a small amount of fecal matter.

RADIOGRAPHIC DIAGNOSIS

- Normal radiographic presentation of the abdomen.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals no evidence of mechanical ileus or radiopaque foreign material. Further clinical monitoring is advised, and abdominal ultrasound could be considered for further definition along with full medical workup in case of persisting or deteriorating clinical signs.

PATIENT

Jilly Klein

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
