Mini Goldendoodle

Only jpg images were submitted. The transformation from DICOM to jpg only allows for limited manipulation of the image. For the best possible results, we suggest submitting DICOM images in the future. Please do not hesitate to contact us should you need any help with the submission process.

**SEX**

Spayed Female

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

**AGE**

2 Years

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

**INTERPRETED BY**Nele Eley, DVM  
Dr. med. Vet. DipECVDI

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

**HOSPITAL NAME**

Tenafly Vet Center

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is postprandial and contains a moderate amount of granulated material compatible with ingesta.

**REFERRING VET**

Kyoung Han

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

**INVOICE**

54048

**RADIOGRAPHIC DIAGNOSIS**

- Normal postprandial abdomen.

**DATE**

9-10-22

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study does not reveal evidence of reduced serosal detail, abdominal organomegaly, or mass effects. The gastrointestinal tract was in a postprandial state at the time of the radiographic study.
