

**PATIENT**

Gio Pelle

PRESENTING CLINICAL SIGNS

acute limping on right hind leg after falling off couch

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE LEFT & RIGHT ELBOW

Mediolateral and craniocaudal views of the left elbow and craniocaudal view of the right elbow totaling 3 images available for review.

RADIOGRAPHIC FINDINGS

The patient has a chondrodystrophic conformation of the long bones with shortening and stunted growth.

No evidence of traumatic osseous injury or abnormal soft tissue swelling is seen. The joint surfaces are well aligned. The growth plate closure is in line with the patient's age.

Mild transverse lucent zone is paralleling the distal ulnar growth plate in both front limbs.

BREED

French Bulldog

SEX

M

AGE

16 Weeks

- Normal radiographic study of the left and right forearm.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study reveals no evidence of traumatic osseous injury, joint subluxation, or luxation. There may be mild growth disturbance as indicated by the lucent zone paralleling the distal ulnar growth plates in terms of osteochondrodysplasia/ osteochondrodystrophy or hypertrophic osteopathy. However, this type of radiographic presentation is rather common in chondrodystrophic dogs and not necessarily of clinical significance.
