

**PATIENT**

Pippa Go

**PRESENTING CLINICAL SIGNS**

Pippa was limping on the left hind leg since yesterday after she came from a daycare. she is non weight bearing on the left hind leg all the time. Painful on palpating the left stifle area  
Abnormal PE/Chem/CBC/UA Results: N/A

**SPECIES**

Canine

**RADIOGRAPHIC STUDY OF THE PELVIS & STIFLES**

Ventrodorsal hip extended view of the pelvis and 2 mediolateral views of a stifle both labeled "right stifle" totaling 3 images available for review in jpeg format.

**BREED**

Norwich Terrier

**RADIOGRAPHIC FINDINGS**

Please consider clarifying if or which of the lateral views represents the left stifle and clarification of the patient's age may be required as well since the submission form states a 6 month old dog while the skeletal maturity on the available images is more consistent with 6 weeks of age.

**SEX**

F

The radiographs do not reveal evidence of traumatic osseous injury. Incomplete fracture or fissure may be occult at this point; however, as far as seen, the osseous structures present within normal limits and the growth plate patterns are within normal limits and bilaterally symmetric as well.

**AGE**

6 Months

**RADIOGRAPHIC DIAGNOSIS**

- Open

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

As far as assessable, no evidence of osseous growth plate or articular injury is evident radiographically at this point in either of the views of the pelvis and presumed bilateral stifles.
