

**PATIENT**

Kitty Rydman

**PRESENTING CLINICAL SIGNS**

P presented 9/8/21 for sneezing and congested. Increased respiratory rate. History of respiratory issues elsewhere (no hx at this clinic). 2/6 systolic murmur on PE. These films were supposed to have been sent after exam but didn't go through.

**SPECIES**

Feline

Abnormal PE/Chem/CBC/UA Results: Murmur. Began treatment with enalapril.

**RADIOGRAPHIC STUDY OF THE THORAX**

Lateral and ventrodorsal whole body views totaling 2 images available for review.

**BREED**

DSH

Thoracic read requested.

**RADIOGRAPHIC FINDINGS**

**SEX**

F (sp)

Multiple spondyloses are seen throughout the thoracic spine.

The degree of pulmonary inflation is deep with wide lumbodiaphragmatic angles and mildly flattened diaphragmatic cupola.

**AGE**

9-7-06

Moderate generalized bronchial lung pattern is noted with mild peribronchial cuffing.

The cardiac silhouette is upright and thin. No evidence of atrial enlargement, pulmonary venous congestion, or cardiogenic pulmonary edema is seen.

**INTERPRETED BY**

Nele Eley, DVM  
Dr. med. Vet. DipECVDI

The course and width of the trachea are considered within normal limits.

There is no evidence of abnormal mediastinal widening.

**RADIOGRAPHIC DIAGNOSIS**

- Moderate generalized bronchial lung pattern.
- No radiographic evidence of cardiovascular pathology or congestive heart failure.
- Spondyloses.

**HOSPITAL NAME**

Cornelius Veterinary  
Clinic

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

**REFERRING VET**

Robert Bullard

The radiographic study does not reveal significant cardiomegaly or any other signs of cardiovascular pathology. However, cardiomyopathy and other may well be radiographically occult and obtaining a cardiac echo could be considered for more detailed information.

**INVOICE**

47542

The changes of the lung may not be of clinical significance; however, they do suggest potential for feline allergic lower airway syndrome. Infectious bronchitis such as viral, bacterial, parasitic, or protozoal is a potential differential diagnosis. Correlate with the clinical findings and consider lower airway sampling for further definition as indicated.
