

PATIENT

Toby Jannuci

PRESENTING CLINICAL SIGNS

E/D/U/D OK NO C/S/D Vomiting on and off
Abnormal PE/Chem/CBC/UA Results: Gastritis R/O Pancreatitis vs others Dental tartar mild otitis externa

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Lateral and ventrodorsal views of the abdomen and thorax each totaling 5 images available for review.

BREED

Labrador Retriever

RADIOGRAPHIC FINDINGS

Abdomen

Moderate spondylosis is present between L1 and L2.

SEX

Male

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

AGE

12 Years

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

Animal Paradise
Hospital

The stomach appears to be contracted. A short linear mineral opacity is seen within the pyloric antrum.

The descending duodenum is filled with gas and rigid in appearance. The small intestinal loops are evenly distributed throughout the mid abdomen. Mild small intestinal gas pattern is noted.

REFERRING VET

Dr. Mostafa Elshafie

A small amount of fecal material is seen within the colon.

Thorax

Multiple spondyloses are seen throughout the thoracic spine.

INVOICE

47576

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

DATE

9-28-21

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

PATIENT

Toby Jannuci

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

SPECIES

Canine

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

BREED

Labrador Retriever

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

- Gastroduodenal maldigestion pattern.
- No evidence of mechanical small intestinal ileus.

SEX

Male

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Pancreatopathy and/or gastroenteropathy with functional ileus appears likely based on the radiographic findings. There is no evidence of mechanical obstruction. Consider further definition by means of ultrasound as indicated per the severity and development of the patient's clinical signs and correlate with the laboratory values.
