

PATIENT

Peaches Citti

PRESENTING CLINICAL SIGNS

P has vomiting for the past 2 weeks P lethargic. ok e/d/u/d no c/s/d

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Right lateral and ventrodorsal views of the thorax and lateral and ventrodorsal views of the abdomen totaling 6 images available for review.

BREED

Domestic Short Hair

RADIOGRAPHIC FINDINGS

Abdomen

The surrounding bony structures are within normal limits.

SEX

Male

A soft tissue opaque nodule is seen level with and dorsal of the 6th coccygeal vertebra.

The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

AGE

13 Years

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic tail is not seen.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

HOSPITAL NAME

Animal Paradise
Hospital

Mild gastric aerophagia is noted.

There appears to be generalized wall thickening throughout the small intestine even though this impression is subjective radiographically.

The colon contains a moderate amount of fecal material.

REFERRING VET

Dr. Mostafa Elshafie

Thorax

The surrounding bony structures are within normal limits.

The extrathoracic soft tissues present homogeneous without abnormalities.

INVOICE

47625

The heart is of normal size and shape and there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

DATE

9-30-21

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

PATIENT

Peaches Citti

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

SPECIES

Feline

The lung parenchyma presents the expected architecture and opacity. The intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

BREED

Domestic Short Hair

RADIOGRAPHIC DIAGNOSIS

- Suspect generalized small intestinal wall thickening.
- Soft tissue nodule in the tail.

SEX

Male

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic findings are very suggestive for generalized wall thickening throughout the small intestine with functional ileus. The findings require further verification by means of ultrasound, but differential diagnosis includes diffuse infiltrative pathology such as with round cells versus severe forms of IBD or other chronic enteropathy.
