COMPUTED TOMOGRAPHIC STUDY OF THE CERVICAL SPINE, RIGHT SHOULDER, & RIGHT CARPUS

Plain and post contrast studies available for review. The elbow is not included in the collimated field of view.

SEX

SF

COMPUTED TOMOGRAPHIC FINDINGS

Number, alignment, and general anatomy of the cervical vertebrae present within normal limits.

The right shoulder joint presents within normal limits. No evidence of osseous abnormality of the scapula or humerus is seen. The subchondral bone surfaces are intact and smooth. There is no evidence of periarticular osteophytes.

AGE

7 Years

The right carpus presents within normal limits. No evidence of articular enlargement, subluxation, luxation, or osteophytosis is seen.

INTERPRETED BY

Nele Eley, DVM
Dr. med. Vet. DipECVDI

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Normal CT findings of the right carpus, right shoulder, and cervical spine.

HOSPITAL NAME

Petroglyph Animal
Hospital

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study does not reveal evidence of structural pathology in the right shoulder or right carpus. The cervical spine presents within normal limits as well. Consider soft tissue injury or inflammation, neurologic disease, as well as elbow pathology as potential underlying causes.
