

PATIENT PRESENTING CLINICAL SIGNS

Emmy Rollins History: Chronic intermittent diarrhea, anorexia and vomiting.

SPECIES Physical Examination: N/A.

Canine Urinalysis: N/A.

Fecal Analysis: Negative.

BREED CBC: N/A.

Standard Poodle Serum Biochemistry: Borer-line normal ACTH stimulation test.

SEX Radiographic Findings: N/A.

Intact Female

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Age *Urinary System*

1 year Full urinary bladder with a normal thickness and appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

WEIGHT Normal trigone area, proximal urethra, and iliac blood vessels.

19 kg Normal iliac lymph nodes. Ureters not visualized.

INTERPRETED BY Normal renal size (left 5.9 cm, right 6.3 cm), echogenic appearance, cortico-medullary differentiation pelvis, and capsule.

Remo Lobetti, BVSc,
MMedVet (Med), PhD, Dipl.
ECVIM

Reproductive System

N/A.

IMAGING PERFORMED BY

Melissa Robinson

Adrenal Glands

Normal position, echogenic appearance, shape, and size. Left 0.38/0.33 cm, right 0.37 cm.

HOSPITAL NAME

Saint Francis Veterinary
Center of South Jersey

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma, regular curvilinear capsule, and normal vasculature. No evidence of inflammatory, neoplastic, infarction, or infiltrative changes noted.

REFERRING VET

Dr Audrey Rollins

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Full gall bladder containing normal anechoic bile. Normal thickness and echogenic appearance of the gall bladder wall. Normal bile duct.

INVOICE

Gastrointestinal

DATE

1/20/23

Normal appearance of the stomach, duodenum, ileo-cecal junction, and colon with no loss of layering, normal wall thickness and peristaltic activity, and no distension of the lumen. Prominent hypoechoic appearance of the submucosal layer of the small intestine with normal wall thickness, no loss of layering, and no distension of the lumen.

PATIENT *Pancreas*

Emmy Rollins Normal size and echogenic appearance. Regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

SPECIES *Free Abdomen*

Canine No mesenteric lymphadenomegaly.
No ascites.

BREED

Standard Poodle

ULTRASONOGRAPHIC FINDINGS

Primary Findings:

- Enteropathy

Secondary Findings:

- None.

SEX

Intact Female

Age

1 year

WEIGHT

19 kg

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Etiologies for the enteropathy would be antibiotic responsive enteritis, inflammatory bowel disease, and dietary hypersensitivity.

With the borer-line normal ACTH stimulation test, emerging Addison's disease needs to be considered.

Further assessment would be TLI and cobalamin assay, monitoring of basal cortisol, and endoscopy of the upper GI tract with biopsies.

Specific therapy would be dependent on an etiological diagnosis. Symptomatic therapy would be novel protein/hypoallergenic diet, cobalamin supplementation, course of metronidazole, and possibly prednisolone.
